ATHENA
CYBERSECURITY

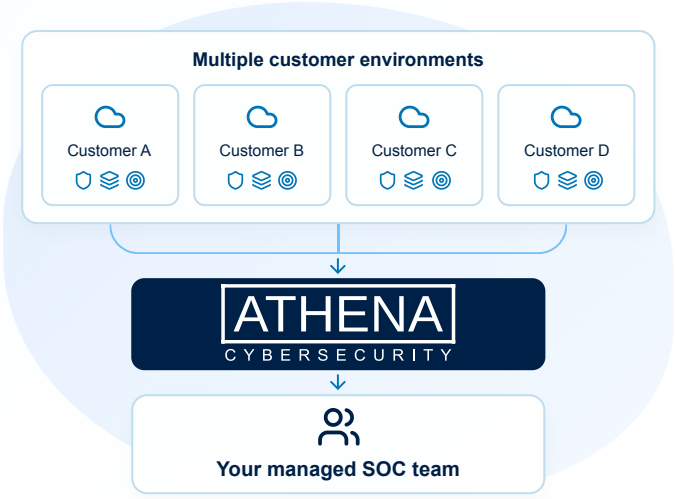
SMARTER ANALYSIS.
STRONGER DEFENCES.

Scale your SOC. Not your headcount.

Vendor-agnostic AI SOC analyst platform for Managed Service Providers.

Athena connects to your customers' existing security tools and workflows, learns from your playbooks and processes alerts at machine speed.

Manage more customers. Reduce analyst workload. Focus on the threats that matter.



Managed SOCs are under pressure to do more with less.

42%
of security alerts go uninvestigated

State of Cybersecurity 2025 (global)

The impact on your managed security business.

More customers don't just mean more revenue. They can also mean:

More alerts
Every customer environment generates additional security events.

More complexity
Different customers use different technology stacks, workflows and security processes.

More analyst workload
Alert volume grows faster than analyst capacity.

More cost to serve
Scaling customer coverage traditionally means scaling headcount.

How Athena Cybersecurity helps

Turn your existing SOC into a scalable, AI-powered operation with continuous investigation and triage:

1. **False positives**
Identify and automatically dismiss false postive alerts before they consume valuable analyst time.

2. **Benign and non-malicious activity**
Automatically identify and dismiss legitimate activity that does not require analyst investigation.

3. **Esclate alerts that require attention**
Automatically escalte alerts that require analyst attention to your analysts. Create & asign Service Desk tickets with full analysis and actionable recommendations.

A scalable, automated 24x7 SOC operation.

Athena helps Managed Security Providers:

- Increase analyst capacity
- Reduce repetitive investigation work
- Support more customer environments
- Reduce operational cost to serve
- Focus human expertise on genuine threats
